

What is Secure Space?

Professional Technology's Secure Space is a unique service that allows you share data in the cloud.

Hosted at our secure datacentres in London and Manchester, Secure Space provides an area for you to share documents and files with other people in your practice or even with external organisations or people.

Using fully secure WebDAV SSL certified connections you can connect to the Secure Space to copy documents and files to the cloud. You can even connect Secure Space as a local drive on your computer to open, modify and save files directly to the cloud.

Folders in the Secure Space can be set to public or private access allowing you to control precisely who has access to what. This lets you setup folders that are completely private to an individual or shared amongst several people or organisations.

Lost your laptop or experienced a desktop crash? Simply load the Secure Space application onto a new device and login to the service to reconnect to your Secure Space account and access all your documents and files in a flash.

Secure Space is continually backed up across our datacentres providing extra protection for your critical files.

Secure Space satisfies UK regulations regarding the encryption and offsite backup of critical files, such as those from the Financial Services Authority (FSA) and Solicitors Regulation Authority (SRA).

What does it cost?

| No. of Users | Cost per User |
|--------------|---------------|
| 5-20 | £10.00 |
